BIT'S ADVENTURES OF BIT

SEASON 1

A journey to discover money, understand the world, and make better decisions.

- UNDERSTAND
- ASK QUESTIONS
- LEARN
- DECIDE
- BUILD

IN THIS BOOK YOU WILL LEARN:

- What money is
- Why it exists
- Problems with today's money
- What Bitcoin is
- Why it's different
- And how it can help all of us

It's not just about money, it's about freedom, responsibility, and a better future for everyone.

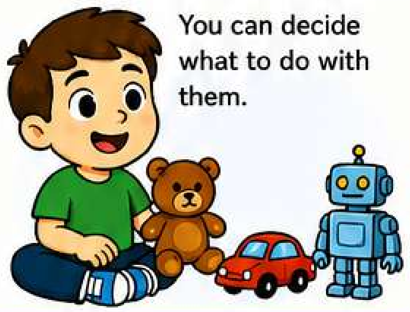
CHAPTER 1
MONEY

1 WHAT IS YOURS

You have things that belong to you. You can decide what to do with them.



It's yours, it's your decision.

2 SHARING AND TRADING

Sometimes you want to change things with others.

I give you this, you give me that.

3 THE PROBLEM

But not always does the other person want what you have.

It's not easy to trade.

4 THE SOLUTION: TOKENS

We use tokens that everyone accepts.

Tokens that everyone accepts.

5 WHAT IF SOMEONE PRINTS TOKENS WITHOUT LIMIT?

If someone makes too many tokens without limit...

Now there are too many tokens.

6 THE EFFECT

Your tokens are worth less. You need more to buy the same thing.

Your tokens are worth less.

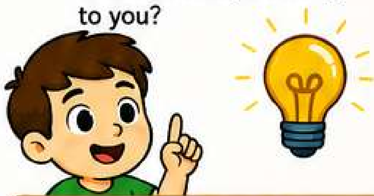
7 CONTROL

What if someone decides when you can use them... or even takes them away?

You don't have control.

8 THE DIFFERENT IDEA

What if there were tokens that no one can print without limit... and that always belong to you?



Limited tokens, fair and always yours.

9 SOMETHING LIKE THAT ALREADY EXISTS

It's called Bitcoin. It's not magic, it's rules that work for everyone.

For everyone. No tricks.

Understanding money is understanding the world.
And now you just took the first step!

Ready to keep learning? Let's go!

CHAPTER 2
WHAT MAKES GOOD MONEY?

Not all money works the same...

1 NOT ALL IS EQUAL

Not everything works equally as money.

Some things work better than others.

2 EASY TO USE

It must be easy to carry and use.

It has to be practical for everyday use.

3 DURABLE

It can't break, wear out or disappear.

It must last a long time.

4 DIVISIBLE

You can use a little or a lot.

It can be divided into small parts.

5 SCARCE

There can't be an infinite amount.

If there is too much, it's worth less.

6 HARD TO FAKE

It can't be easily copied.

It must be hard to copy or imitate.

7 EASY TO VERIFY

You can know if it's real.

It has to be easy to verify.

8 GLOBAL

It works anywhere in the world.

It must be accepted everywhere.

9 KEY IDEA

Good money follows these rules.

These qualities make it useful and valuable.

If it fails at these, it loses value.
That's why not all money is equal.

CHAPTER 3

WHY DOES MONEY LOSE VALUE?

Sometimes... something happens that you can't see

1 IMAGINE THIS

You have 10 tokens.
With them, you can buy things.

Tokens have value.

2 EVERYTHING NORMAL

An ice cream costs 1 token.

With 1 token, you can buy an ice cream.

3 EVERYTHING CHANGES

But someone starts creating more tokens...

Out of nowhere, many more tokens appear.

4 NOW THERE ARE MORE

Now there are many more tokens in the world.

There are too many tokens to buy the same things.

5 THE PROBLEM

Your tokens are no longer worth the same.

With them, you can buy less now.

6 THE EFFECT

The ice cream now costs more.

Now you need 2 tokens to buy the ice cream.

7 YOU WORK THE SAME

You do the same things... study, work, you make an effort.

You put in the same effort as always.

8 BUT YOU RECEIVE LESS

But you can buy fewer things.

Your money buys less every day.

9 WHAT'S HAPPENING

This is called... losing value.
It happens when there is too much money.

More money ≠ more things.
It only makes it worth less.

It's not magic... it's because there's more money.
And that affects everyone.

CHAPTER 4

WHO CONTROLS THE MONEY?

Someone makes decisions... even if you don't see it

1 SOMEONE DECIDES

There are people who make decisions.

They decide for everyone.

2 THEY CREATE MORE MONEY

They can create more money whenever they want.

They print more money out of nothing.

3 THEY CHANGE THE RULES

They can also change the rules.

They can make new rules whenever they want.

4 THEY DON'T ASK YOU

They don't ask for your opinion.

You have no voice or vote.

5 IT AFFECTS EVERYONE

But it affects the whole world.

Everyone feels the consequences.

6 YOUR MONEY CHANGES

Your money can become worth less.

You can buy less things.

7 YOU DON'T CONTROL IT

You don't have control.

You're locked in a system you didn't choose.

8 IT DEPENDS ON THEM

It depends on what they decide.

Your future depends on their decisions.

9 KEY IDEA

Real money depends on people.

It's not automatic.
It's human decisions.

And people... can change their minds.
That's why the system is not stable.

CHAPTER 5

WHAT IF NO ONE COULD CHANGE THE RULES?

A different idea...

1 BIT ASKS A QUESTION

Bit asks a question...

He always looks for better answers.

2 THE PROBLEM

Money changes...
and you have no say

Your money is worth less and you can't do anything.

3 THE IDEA

What if there was money...
with fixed rules?

An idea could change everything.

4 NO ONE GIVES ORDERS

No one could control it.

No bosses making decisions for everyone.

5 YOU CAN'T CREATE MORE

You can't create
it without limit.

Limited amount and known by everyone.

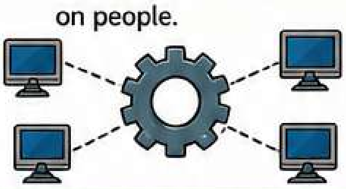
6 IT'S ALWAYS YOURS

That always
stays yours.

You hold the keys to your money.

7 IT WORKS ON ITS OWN

And it works
without depending
on people.



A system that keeps running by itself.

8 FOR EVERYONE

Anyone anywhere
can use it.

No matter where you are, it's for everyone.

9 IT EXISTS

That idea already exists...
It's called Bitcoin.

Bitcoin is that idea made real.

It's not magic...
it's rules that no one can change.

And that makes
it different.

CHAPTER 6

WHY CAN'T ANYONE BREAK BITCOIN?

The power of the network...

1 MANY PEOPLE

Thousands of people
use Bitcoin.

The more people involved,
the stronger the network.

2 MANY COMPUTERS

Many computers
keep the system running.

There are thousands of nodes
all over the world.

3 EVERYONE CONNECTED

They are all connected
to each other.

Information travels
across the entire network.

4 EVERYONE CHECKS

Everyone checks that
everything is correct.

Each node verifies transactions
and blocks.

5 IF SOMETHING FAILS...

If someone tries to cheat,
the others reject it.

The network doesn't accept
what is not valid.

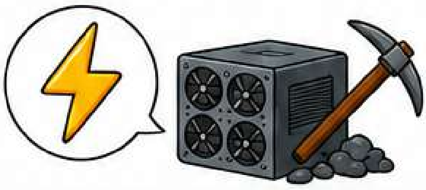
6 NO BOSS

No one is in charge.
No one controls it.

There is no central
authority.

7 LOTS OF ENERGY

Real energy is used
to protect the network.



The energy makes it very
expensive to attack the network.

8 VERY HARD TO CHANGE

Changing the system costs
too much and is almost
impossible.

To break Bitcoin, you would need
more power than the whole
network together.

9 KEY IDEA

That's why no one
can break it.

The strength of Bitcoin
is the network.

It's not strong because someone protects it...
IT'S STRONG BECAUSE EVERYONE PROTECTS IT.

CHAPTER 7

WHAT ARE PRIVATE KEYS AND WHY IS YOUR MONEY YOURS?

The secret of Bitcoin...

1 WHAT IS A KEY?

It's like a secret key.

A key is a very long and unique code.

2 IT OPENS YOUR MONEY

It is used to access your money.

With your key you can open and move your Bitcoin.

3 ONLY YOU

Only you should have it.

Never share it with anyone.

4 IF YOU HAVE IT

You can use your Bitcoin.

You have total control.

5 IF YOU DON'T HAVE IT

It's not really yours.

Without the key, you can't access your money.

6 NO ONE CAN HELP YOU

No one can get it back for you.

Bitcoin has no "recovery" button.

7 YOUR RESPONSIBILITY

You are responsible.

Keep your key safe and make back-ups.

8 NO PERMISSION NEEDED

You don't need permission.

You and your key are enough.

9 KEY IDEA

Your keys = your money.

If you control your keys, you control your future.

Don't trust... verify and control.

IF YOU DON'T HAVE THE KEYS, IT'S NOT YOUR MONEY.

CHAPTER 8
HOW IS BITCOIN SENT?
Moving value without asking for permission...
BiT
1 YOU WANT TO SEND
Bit wants to send Bitcoin to his friend.
BiT
He decides how much and to whom to send.
2 DESTINATION ADDRESS
You need the destination address.
bc1qxy2...
8a7z9m
It's like an account number, but without banks.
3 LIKE AN EMAIL
It's like sending an email.
The address tells the network where it should go.
4 YOU CREATE THE TRANSACTION
Your wallet creates a message with the details.
Send
0.01 BTC
bc1qxy2...
SEND
From: Bit
To: bc1qxy2...
Amount: 0.01 BTC
Fee: 0.0001 BTC
It includes: origin, destination, amount and fee.
5 SIGN WITH YOUR KEY
It is signed with your private key. This proves it's yours.
Without your signature, no one can spend your Bitcoin.
6 SENT TO THE NETWORK
The transaction is sent to the whole network.
BiT
Anyone can see it, but no one can change it.
7 NODES VERIFY
Many computers (nodes) verify that everything is valid.
They check: funds, signature, rules and that it's not spent.
8 ADDED TO A BLOCK
If it's valid, it's added to a block together with other transactions.
Tx1
Tx2
Tx3
...
The block is saved in the blockchain permanently.
9 KEY IDEA
You don't send money... you reassign value.
BiT
Value moves freely, without intermediaries.
You don't need a bank.
You don't need permission.
You only need your keys.
BiT
That's how BITCOIN moves!

CHAPTER 9
WHY DOES BITCOIN HAVE VALUE?
What makes something valuable...
1 WHAT IS VALUE?
Something is valuable... if someone wants it.
BiT
Value is not in the object, it's in the people.
2 AGREEMENT
Many people accept it as something valuable.
The more people accept it, the more value it has.
3 MONEY
It is used to exchange goods and services.
Money is a tool to exchange value.
4 PROBLEM
Traditional money loses value over time.
More is printed and printed, and each time it's worth less.
5 SCARCITY
Bitcoin is limited: there will only ever be 21 million.
21 MILLION MAXIMUM
Scarcity makes it valuable.
6 SECURITY
No one can break the Bitcoin network.
It's resistant, decentralized and very hard to attack.
7 UTILITY
It can be sent to anyone, anywhere in the world.
Fast, global and without intermediaries.
8 TRUST
You don't need to trust people, but math and rules.
FIXED RULES
☑ NO BOSSES
☑ NO PRINTING
☑ NO SCAMS
Trust comes from the system, not from people.
9 KEY IDEA
For all these reasons... Bitcoin has value.
Scarce + Useful + Secure + Trustworthy = Real value.
It's not magic...
IT'S BECAUSE IT WORKS BETTER.
Value comes from what it does.

CHAPTER 10

WHY DOES THE PRICE OF BITCOIN GO UP AND DOWN?

The market in action...

1 THE PRICE

Bitcoin has a price.

$60,000

Like anything else you buy and sell.

2 GOES UP AND DOWN

It's not always the same.

The price changes all the time.

3 SUPPLY

There is a limited amount.

21 MILLION MAXIMUM

Only 21 million can ever be created.

4 DEMAND

More people want it.

When more people want Bitcoin, demand increases.

5 IF MORE BUY

The price goes up.

More demand than supply = the price goes up.

6 IF MORE SELL

The price goes down.

More supply than demand = the price goes down.

7 NEWS AND EMOTIONS

People react.

NEWS!

Good or bad news, rumors, fear or excitement move the price.

8 IT'S VOLATILE

It moves fast.

Bitcoin is new and the market is still growing.

9 KEY IDEA

Price changes... value is built.

Understanding this helps you avoid fear, FOMO and mistakes.

- Not everything that goes up fast lasts.
- Not everything that goes down is broken.
- Understanding this helps you make better decisions.

PRICE IS EMOTION + LOGIC.

NOW YOU UNDERSTAND BITCOIN. YOU DON'T NEED TO BELIEVE...

...YOU CAN DECIDE FOR YOURSELF.
